

Weekly report

SNU

BongHo Kim

Schedule in CEA

- Linac cathod is still in commissioning
- Maybe we can use positron beam next week.
- Packing of BG trap & Antion chamber will be started from beginning of October. (Almost impossible to measure positronium in this case)
- Delivery will be done btw end of Oct to beginning of Nov.
- I will visit CERN 3rd ,Oct.

Positronium detection preparation

Before measuring positronium

- Make data analysis code usable in short time. (check positronium fraction)
- Make data analysis code for low intensity for beam calibration
- Finalize Antion simulation : ongoing

Or before move to CERN (depends on source usability in CERN)

- Study linearity for gamma energy using ^{22}Na source ?
