# **STATUS REPORT**

Ahram lee

# TOF Detector Preparation

## Progress and Plan

96 sets of bakelite guide have arrived on 03/13(Tue).

can start 3bar-2trig test with old FADC(FADC500-IBS).

FADC \*2 + TCB + DAQ program will be delivered on 03/16(Thu).

### Shielding materials test

Tyvek, Myler in lab(306)

VM2000 in IBS is not enough, but in Yangyang. (need?)

# HEP2009 Down

Hep2009 Problem – external controller

Previous slide (03/08)

Storages and Hep2011 have been mounted on Hep2009.

But, everytime we try to backup(cp), for instance Storage1 to Storage2, or 3,

They give us 'Input/Output error' – which is related with hardware.

Also, Storage 1 and 2 keep 'Initializing' – still don't know what it means(format?)

By using Hep2009, we cannot backup storages. (if lucky, it can be accessed for a short time)

# HEP2009 Down

Hep2009 Problem – version

Previous slide (03/08)

Assign Hep2011 to a main server?

The external controller in Hep2009 and storages are all ver.6. (No external card in Hep2011)  
However, nowadays, it is ver.13.  
Ver. 6 controller is not available to buy .....

# HEP2009 Down

## New Plan

Backup 3 storages and HEP2011 data to NAS(48TB).

Since HEP2009 is not stable, transferred data packet should be small (<1TB).

It might take some times (~ a week?)

NAS will be installed on 03/16(Thu).

For 5 years guarantee, + 600,000 KRW costs.
