

Positronium measurement preparation

Bongho Kim

Proton gun values

FC (metal plate) current:

(repel secondary electrons/ collect fraction of beam / release of secondary electrons)

- Strange current behavior!

From A.Welker's slide

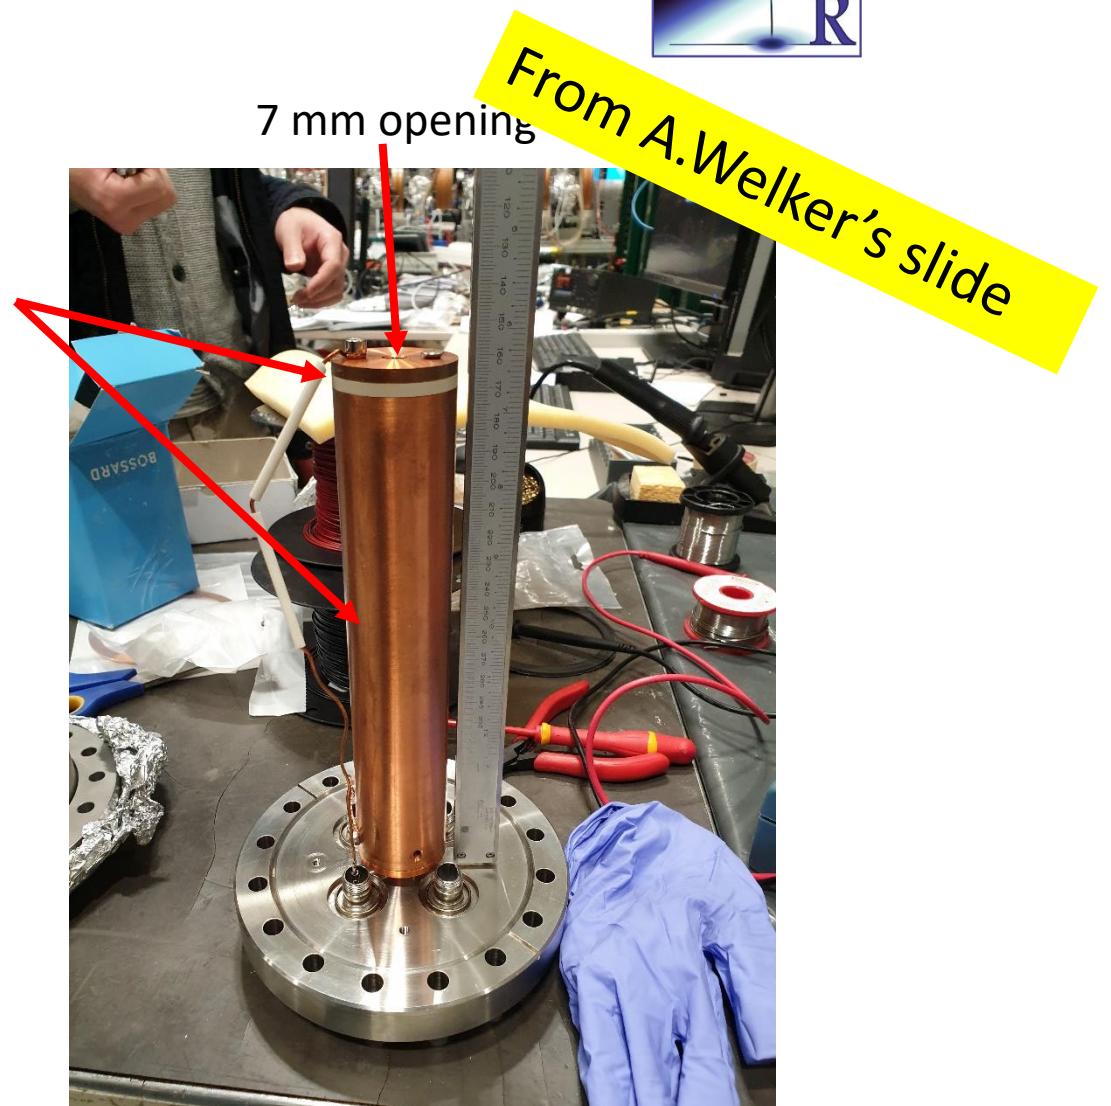

New Super FC

A long FC with a small opening:

Measure the currents to align the beam

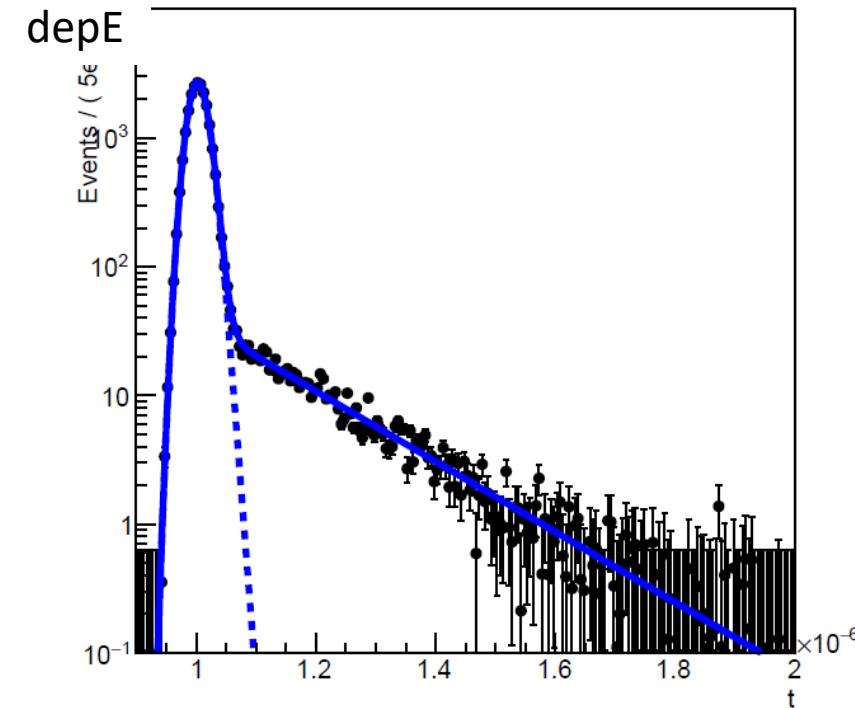

- Minimize the current on top
 - Maximize the current in the cup
- While aligning the proton gun

Bellow is installed to adjust proton gun direction

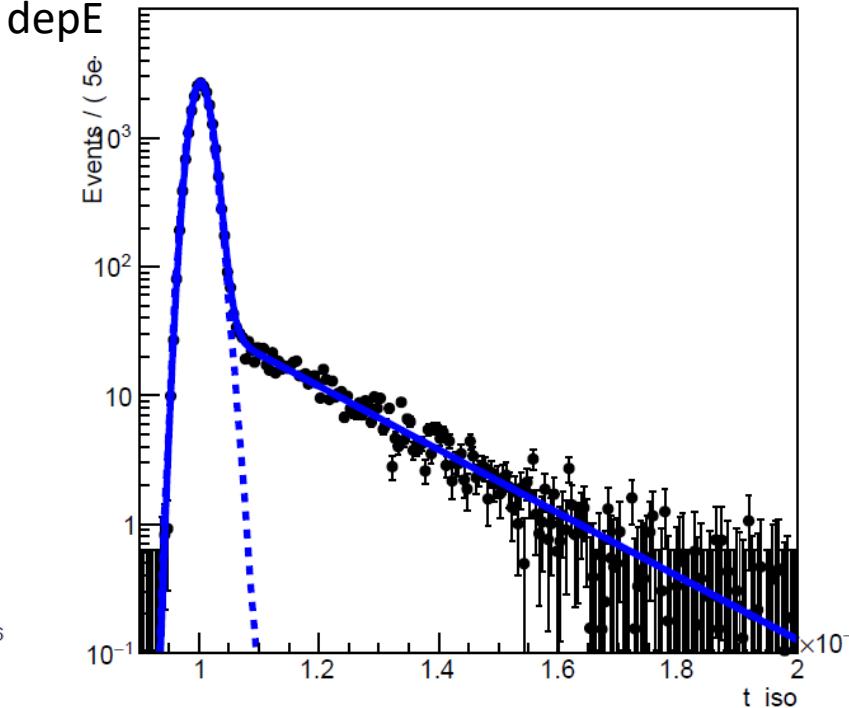

Positronium simulation fitting

A RooPlot of "t"

A RooPlot of "t_iso"

- Error : $\Delta E/E = 0.1$
 - Fitting : gaus (x) exp + gaus (x) exp
- Tau : 1.59 ± 0.06
- Tua(iso) : 1.76 ± 0.06
- Chisquare : too high...
 - Need to study more
